Tristan Davis

Element Materials Technology, LLC
328 Ley Rd, Suite 100
Fort Wayne, IN 46825

Dear Tristan Davis:

I have received your request to add, by administrative certification, EPA methods 200.8 rev 3.0 and 245.1 rev 3.0 to your scope of certification due to the acquisition of our new materials facility in Legionsville (C-18-02) with Element Materials Technology, Fort Wayne, IN. I have reviewed EPA method 200.8 (Determination of Trace Elements in Waters and Wastes by Inductively Coupled Plasma Mass Spectrometry) and EPA method 245.1 (Determination of Nitrate in Drinking Water by Cadmium Atomic Absorption Spectrometry) and they are listed on the initial demonstration of compliance and the monitoring detection limit determination.

Compliance monitoring data generated using the above by the laboratory is for compliance with the National Primary Drinking Water Regulations (NPDWR) as promulgated by 40 CFR Part 141.142 and the Indiana Primary Drinking Water Regulations (IPDWR) as promulgated by 32 IAC 2-2-2.

Element Materials Technology, Fort Wayne, IN is hereby certified for monitoring for antimony, barium, beryllium, cadmium, chromium, cyanide, fluoride, mercury, nitrate, selenium, H₂S, copper, and lead. See the accompanying scope of certification for the methods certified.

This administrative certification is valid until July 5, 2018, or until a full site assessment is performed by the Indiana drinking water certification officer and full certification is granted.

If you have further questions, please contact me.

Sincerely,

Katie E. Sullivan
Chemistry Laboratory Certification Officer
